polymers are ubiquitous and pervasive in industry science and technology these giant molecules have great significance not only in terms of products such as plastics films elastomers fibers adhesives and coatings but also less obviously though none the less importantly in many leading industries aerospace electronics

automotive biomedical etc well over half the chemists and chemical engineers who graduate in the United States will at some time work in the polymer industries if the professionals working with polymers in the other industries are taken into account the overall number swells to a much greater total it is obvious that knowledge and understanding of polymers is essential for any engineer or scientist whose professional activities involve them with these macromolecules not too long ago formal education relating to polymers was very limited indeed almost nonexistent speaking from a personal viewpoint I can recall my first job after completing my Ph.D. the job with E. I. du Pont de Nemours dealt with polymers an area in which I had no university training there were no courses in polymers offered at my alma mater my experience incidentally was the rule and not the exception

processes for recovering fresh water from the oceans of which men have dreamed since antiquity have changed markedly in the last 20 years in fact it has become possible so to increase the productivity of the technical steps involved that the cost of production of such water is almost three orders of magnitude smaller than for other large volume industrial products however the monographs and comprehensive reviews which have appeared to date in this field have been prepared by specialists for specialists in accordance with the tradition and objectives of the Gmelin handbook this bibliography has been prepared to provide access to all of the ways in which fresh water can be and has been obtained on an industrial scale from the ocean production of fresh water from sea and brackish waters amounts to almost two million cubic meters per day and this is increasing by about 25 per year this means that it will increase nearly tenfold in 10 years
