research methods a practical guide for students and researchers is a practical guide on how to conduct research systematically and professionally the book begins by distinguishing between causal and interpretive sciences it then guides the reader on how to formulate the research question review the literature develop the hypothesis or framework select a suitable research methodology and analyze both quantitative and qualitative data the book uses classic examples as exemplars it also uses many examples from different disciplines and sectors to demonstrate and showcase the inter connections and wider applications of research tools the book emphasizes integration it does not merely provide a smorgasbord of research designs data collection methods and ways to analyze data instead it shows how one could formulate research strategies given the outcomes the researchers are required or tasked to deliver the revised edition includes three new chapters on time series including spatial models machine learning and meta analysis in addition existing chapters have been expanded to include more examples digital research and new material

methodology is the eld which is indisputably complex in the academic world it is often said to be important yet in everyday academic practice it is not always treated accordingly in teaching methodology is often a mandatory course usually it consists of learning how to adopt several common approaches when doing research and how to conceive a research design often leading to a survey this usually leads to collecting data on a modest scale and when the opportunity arises analysing the data with the help of some statistics ask the students of their opinion at the end of such a course and they tend to heave a deep sigh of relief and say i have got through it then their real courses start again in which methodology often does not play a role at all we are of the opinion that writing off methodology in this way is a real pity it ignores the valuable role that methodology should play in academic teaching as a whole here methodology is presented as a form of thinking and acting that while obviously entailing research work can also include the design and change of organisations this broad approach has been purposefully chosen as it is almost obvious from research and graduation projects that the students do not really have a clue what methodology involves and therefore wasting their time by producing work that has a little quality

research is defined as the creation of new knowledge and or the use of existing knowledge in a new and creative way so as to generate new concepts methodologies and understandings research is not only to develop the process or to find a formula as we do in the science but in the field of social science the research work is oriented towards the solution of a problem or to seek an answer of a question the first step of a research process is to identify a problem the selection of a problem is governed by reflective thinking unthinking activity is governed too completely by tradition or by emotion primitive life was largely without effective reflective thought until some intelligent individual conceived of a new solution for an old problem therefore upper educational groups ever do much careful ordered thinking the normal human mind thinking may be classified into four categories convergent divergent reflective and scientific thinking in reflective thinking individual conceived for a new solution for an old problem but scientific thinking is in terms of carefully organized reflection

the process of research methodology is a way to figure out how to solve a research problem in a planned way it is the study of the methodology of scientific inquiry it is the standard operating method through which researchers describe evaluate and anticipate phenomena the goal is to provide the research work plan methods materials scientific instruments and approaches pertinent to the problem s resolution are all covered according to the author of this book research methods include everything and everything utilized to carry out research this term alludes to the means through which researchers carry out their investigations although the goal of research is to uncover the hidden and undiscovered truth or to establish verify an established fact the purpose of research is to find answers to problems via the application of the scientific knowledge and techniques this book covers important issues in the area of research methodology including introduction to research study planning with sample design and data collecting techniques with emphasis on the value of data analysis the book goes on to discuss the key aspects of hypothesis formulation in the research and test technique including examples from the fields of science and business
